

Email Submission: Alan Manson Part 2

Office of the Gene Technology Regulator
Australian Government Department of Health

Dear committee members,

I would like to add some additional comments below to the emailed submission I sent to you in the past hour.

Every single application your office receives for genetically modified goods, GM animals, GM crops, GM insects, GM vaccines, GM medicines, should be rejected by Australia's office of the OGTR because of the uncertainty that this technology will have on the environment.

Most of Europe has rejected GMO's, Americans hate GMOs, and the world is becoming obese, deformed, mutated and maimed because of them.

These genetic modifications will alter all life on the planet and cause untold chaos, and no one really knows where the technology is going with this. It seems its all about money and profits - nothing else.

There are people pulling up GM crops. Most consumers reject food with GMOs if they are told about it, so we certainly do not want them deregulated.

Your job should be to protect humanity, not destroy it. Everyone involved in this destruction of our planet will be held accountable for whatever part they play in GMO technology.

I urge you pay close attention to the submissions this time, and listen to the voice of the people, and not ignore them as you did for the Cholera vaccine experiments on the people in Australia in 2013, for surely the wrath of God will be poured out on the "Destroyers of the Earth" as is warned in the scriptures.

(Rev 11:18) "*And the nations were angry, and thy wrath is come, and the time of the dead, that they should be judged...**and** [God] **shouldest destroy them which destroy the earth.**"*

Sincerely

Alan Manson
